SECTION 11: Toxicological information

11.1 Information on toxicological effects
- Acute toxicity: HUMAN STUDIES: There are no human toxicity studies available. ANIMAL STUDIES: In mice, signs of toxicity including decreased activity, piloerection, and exophthalmus were observed at doses of 166-5000 mg/kg.
- Skin corrosion/irritation: No data available.
- Serious eye damage/eye irritation: No data available.
- Respiratory or skin sensitization: No data available.
- Germ cell mutagenicity: Dioxybenzone was nonmutagenic when assayed directly and was weakly mutagenic with metabolic activation in Salmonella strain TA1537. Dioxybenzone was not mutagenic in vivo in the mouse micronucleus test. A mouse lymphoma forward mutation assay reported Benzophenone-8 did not induce mutant frequencies significantly greater than controls when assayed directly; with metabolic activation, Benzophenone-8 induced dose-dependent mutant frequency increases, and the investigator concluded it is nonmutagenic when assayed directly but under metabolic activation it induces a significant, dose-dependent increase in mutant frequency.
- Carcinogenicity: HUMAN STUDIES: There are no human toxicity studies available. ANIMAL STUDIES: Dioxybenzone given orally delayed skin tumors and inhibited tumor incidence and tumor burden in the two-stage mouse skin carcinogenesis model.
- Reproductive toxicity: No data available.
- STOT-single exposure: No data available.
- STOT-repeated exposure: No data available.
- Aspiration hazard: No data available.
